Mastering Water and Renewable Energy in a mutating world ? Ask ICOLD !

by Michel de Vries

It is now well established that the conditions are ripe for their development in the world. This means that a significant share of investment should be directed towards the construction of new dams, not only for power, but also for water supply. The 21 Dam Symposium by the ICOLD World Dams Association, from 18-20 June 2014 in Paris, France, will be a unique opportunity to discuss the latest developments in dam construction and dam safety.
