**Climate Change: Benefits of Dams & Reservoirs**

The benefits of dams and reservoirs are well known. They provide water for drinking, irrigation, and industrial use. They also generate electricity and provide flood protection. In addition, they can help to mitigate climate change by storing water and releasing it during dry periods. This helps to maintain the water cycle and reduces the need for fossil fuels to generate electricity. Dams and reservoirs can also help to reduce greenhouse gas emissions by providing a renewable source of energy. Finally, they can help to protect the environment by providing a habitat for fish and other wildlife.

**ICOLD Inaugures 21st Annual Meeting in New Delhi, India**

The International Commission on Large Dams (ICOLD) inaugurated its 21st Annual Meeting in New Delhi, India, on 28th April 2011. The meeting was held at the Sheraton Hotel and was attended by over 1000 delegates from 60 countries. The meeting was the largest ICOLD meeting ever held in India and was a great success. The meeting was held in a beautiful city and was a great opportunity for ICOLD members to meet and discuss the latest developments in the dam industry. The meeting was also a great opportunity for ICOLD members to discuss the latest developments in climate change and the role of dams and reservoirs in mitigating climate change.

**ICOLD Participates in International Day of the Girl**

ICOLD participated in the International Day of the Girl on 11th April 2011. The day was celebrated in many countries around the world and was a great opportunity for ICOLD members to discuss the role of dams and reservoirs in providing water and electricity to girls and women. ICOLD members discussed the challenges faced by girls and women in accessing water and electricity and discussed ways in which dams and reservoirs can help to address these challenges. ICOLD members also discussed the role of dams and reservoirs in providing water and electricity to girls and women in rural areas.

**ICOLD Takes Long-term View on Dams**

ICOLD has taken a long-term view on dams and reservoirs. ICOLD believes that dams and reservoirs are a key part of the solution to the world's water and energy needs. ICOLD believes that dams and reservoirs can help to provide water and electricity to people in a sustainable way. ICOLD believes that dams and reservoirs can help to provide water and electricity to people in a way that is safe, reliable, and affordable. ICOLD believes that dams and reservoirs can help to provide water and electricity to people in a way that is environmentally friendly. ICOLD believes that dams and reservoirs can help to provide water and electricity to people in a way that is socially responsible.

**Energy Storage and Reservoirs**

Energy storage and reservoirs are a key part of the solution to the world's energy needs. Energy storage and reservoirs can help to provide energy in a sustainable way. Energy storage and reservoirs can help to provide energy in a way that is safe, reliable, and affordable. Energy storage and reservoirs can help to provide energy in a way that is environmentally friendly. Energy storage and reservoirs can help to provide energy in a way that is socially responsible.

**How to Deal with Climate Change**

Climate change is a global problem that requires a global solution. One way to deal with climate change is to reduce greenhouse gas emissions. Another way to deal with climate change is to adapt to the effects of climate change. Dams and reservoirs can help to deal with climate change in a number of ways. Dams and reservoirs can help to reduce greenhouse gas emissions by providing a renewable source of energy. Dams and reservoirs can also help to adapt to the effects of climate change by providing water and electricity to people in a sustainable way. Dams and reservoirs can also help to adapt to the effects of climate change by providing water and electricity to people in a way that is safe, reliable, and affordable. Dams and reservoirs can also help to adapt to the effects of climate change by providing water and electricity to people in a way that is environmentally friendly. Dams and reservoirs can also help to adapt to the effects of climate change by providing water and electricity to people in a way that is socially responsible.

**ICOLD 2011 Workshop**

ICOLD is holding a workshop in 2011. The workshop will be held in New Delhi, India, on 28th April 2011. The workshop will be attended by over 1000 delegates from 60 countries. The workshop will be the largest ICOLD workshop ever held in India and will be a great success. The workshop will be held in a beautiful city and will be a great opportunity for ICOLD members to meet and discuss the latest developments in the dam industry. The workshop will also be a great opportunity for ICOLD members to discuss the latest developments in climate change and the role of dams and reservoirs in mitigating climate change.
