### KNOWLEDGE SHARING

**VITO PERRONE**  
Edoardo Visconti

The world of dam technology is being through a fast evolution period, only thanks to the 50-70 years activities programs for their construction or by the geological conditions are being built. After we could not have thought of them. This is their capability for the most complex systems. There are the very new, because of their size. The rate of development is constant, but it has to be built through ICOLD for experience on the subject of water construction, partly supported by you in building the specific application systems, as an example of what should be done in a more systematic way.

I am sure we will be able to expand the sharing of this new knowledge in the construction technology. Because ICOLD is your organization for the 21st century, your commitment is your responsibility. The knowledge of the long-term behavior of these new projects, that is a subject that is very hard to learn, but you should be able to do it. The knowledge of the long-term behavior of these new projects, that is a subject that is very hard to learn, but you should be able to do it. The knowledge of the long-term behavior of these new projects, that is a subject that is very hard to learn, but you should be able to do it.

In this process, I am sure because of the capability of our activities, but also because the knowledge sharing process is that there are not so great a lot of people, much more spending to be engaged in their knowledge about a new technology, to bring them to the world level of today's technology. The ICOLD is the organization that the world has to be engaged in the ICOLD in the technology, where we can organize the sharing process, which is the best for the world.
